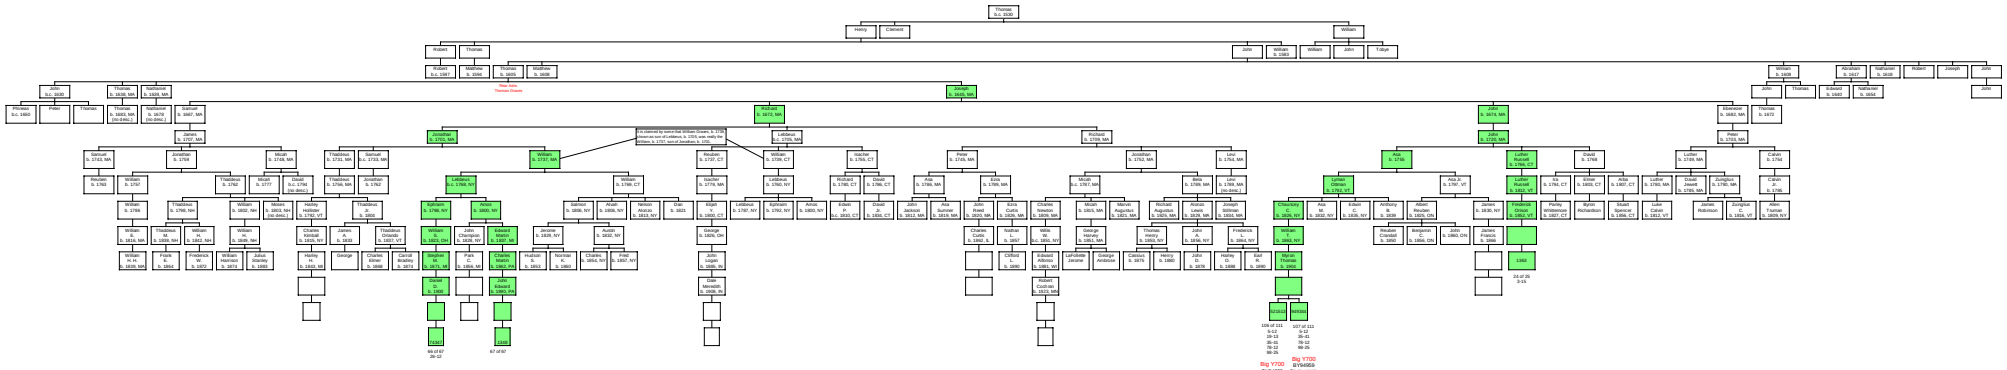
Greaves Family of Stepney, London, England, and Descendants of Rear Adm. Thomas Graves of Charlestown, MA (Gen. 28)

(Rev. 6 July 2021)



NOTES: This chart shows male lines of descent only, since the focus is on using Y-DNA analysis to trace the Graves surname.
The number in each tattoo colored box is the DNA test ID.
When two descendants of a common ancestor have exactly the same DNA test results, the number of the common ancestor is shown in the box, and all boxes up to and including the common ancestor have been given the same color.
All boxes with the same color have the same DNA test results.
24 of 25 means that 24 of the 25 markers matched the inferred ancestral haplotype.
A notation like 19-38 indicates a mutation from the ancestral haplotype, and means marker 19 had a value of 19.

The inferred ancestral haplotype is the mode values shown in the master table of Y-DNA test results for the group that this genealogy is part of, not necessarily the same as the mode values for all of group R1-Z195.
