

Y-DNA GROUP R1-169a
 MALE GRAVES DESCENDANTS VIA SNP BY12203
 SNP TREE FROM ADVANCED TESTING
 (Rev. 14 Jan. 2017)

BY12203 and PF682 are known SNPs. The others below those are novel variants that were found from Big Y tests at Family Tree DNA. This is a subset of the R Haplogroup Y-SNP chart at www.gravesfa.org/R-Y-SNP-chart.pdf. The genealogy chart for this is at www.gravesfa.org/DNAchart169-Thomas2.pdf. The purpose of the SNP testing and the charts is to determine how the various Graves/Greaves genealogies fit into the R-haplogroup tree, how the genealogies that share a common Graves/Greaves ancestor are connected, and to eventually define individual branches of each genealogy.

The Graves members of this Y-DNA group can be seen on the public Y-DNA results chart of the Graves DNA project on the Family Tree DNA website.

More male descendants need to be tested with next generation tests.
