

Descendants of Thomas Greaves and Joan ----- of Northamptonshire & Buckinghamshire, England (Gen. 47)
(Rev. 15 March 2017)

NOTES: This chart shows male lines of descent only, since the focus is on using Y-DNA analysis to trace the Greaves surname. The number in each bottom colored box is the DNA test ID. The colored boxes indicate that those lines descend from a common Greaves ancestor, as indicated by Y-DNA STR and SNP testing. 24 of 25 means that 24 of the 25 DNA markers matched the interest ancestral haplotype. A notation like 13:19 indicates a mutation from the ancestral haplotype, and means marker 13 had a value of 19.

Genealogy 270 for John Greaves of Virginia, an emigrant to America in the late 1600s, is descended from this genealogy.
